                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ISOId=095271-2; Sequence=VSP 004538, VSP 004539;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Ubiquitous; highest levels in testis.
PTM: Upon insulin-stimulation, phosphorylated on serine reby MAPK kinases.
PTM: ADP-ribosylated (-tope of the PARP family.
SIMILARITY: Contains 15 ANK repeats.
SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nicotinamide + {ADP-D-ribosyl}(N+1)-acceptor.

SUBUNIT: Oligomerizes and associates with TMKS2. Interacts with the cytoplasmic domain of LNPEP/Otase in SLC2A4/GLUT4-vesicles. Binds to the N-terminus of telomeric TRF1 via the ANK repeats.

SUBCELLULAR LOCATION: Cytoplasmic, associated with the Golgi and with juxtanuclear SLC2A4/GLUT4-vesicles. A minor proportion is also found at nuclear pore complexes and around the pericentriolar matrix of mitotic centromeres. During interphase, a small fraction of TMKS is found in the nucleus, associated with TRF1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ALTERNATIVE PRODUCTS: Event=Alternative splicing; Named isoforms=2;

Essential for the circadian rhythmicity of locomotor activity, eclosion behavior, and for the rhythmic component of the male courtship song that originates in the thoracic nervous system. The biological cycle depends on the rhythmic formation and nuclear localization of TIM, which promotes complex. Light induces the degradation of TIM, which promotes elimination of PER. Nuclear activity of the heterodimer coordinatively regulates PER and TIM transcription through a negative feedback loop. Behaves as a negative element in circadian restrict transcriptional loop. Does not appear to bind DNA, suggesting indirect transcriptional inhibition (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mol.

SIMILARITY: Contains 2 PAS (PER-ARNT-SIM) dimerization domai
SIMILARITY: Contains 1 PAS-associated C-terminal (PAC) domai
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 translocates into the nucleus (By similarity).
SUBCELLULAR LOCATION: Nuclear at specific periods of the
First accumulates in the perinuclear region about one hou
translocation into the nucleus. Interaction with Tim is r
for nuclear localization (By similarity).
PTM: PHOSPHORYLATED WITH A CIRCADIAN RHYTHMICITY, PROBABL
DOUBLE-TIME PROTEIN (DBT). PHOSPHORYLATION COULD BE IMPLI
THE STABILITY OF DER MONOMER AND IN THE FORMATION OF HETE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Biol. Evol. 10:127-139(1993).
FUNCTION: Essential for biological clock functions.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaces for the production of Assembly; (2) and AgfA-homologue fimbrin subunits, respectively; (2) directing recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequences grown on a Salmonella, E. coil or acid sequence or sequences grown on a Salmonella, E. coil or acid sequence or sequences grown on a Salmonella, E. coil or acid sequence or sequences grown on a Salmonella, E. coil or acid sequence or sequences grown on a Salmonella, E. coil or acid sequence or sequences grown on a Salmonella, E. coil or acid sequence or sequences or sequences or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for cellciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the accemplification of the accemplification of the accemplification.

               The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative fimbriae (SER1/TMAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinantion of a recombinant gene back into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid polymer comprising a recombinant of the chromosome of the segment or segments of foreign amino acid polymer comprising a recombinant agfA protein containing a replacement segment or segments of foreign amino acid polymer comprising separation and the containing a recombinant segment or segments of foreign amino acid polymer comprising segments of foreign amino acid polymer comprising segments of foreign amino acid polymer comprising segments of foreign amino acid polymer comprising segments of foreign amino acid polymer comprising segments of foreign amino acid polymer comprising segments of segments of foreign amino acid polymer comprising segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments of segments segments of segments of segments of segments segments of segments segments

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the example of the present sequence is given in the polymer of the present sequence is given in the present sequence is given in the present sequence is given in the present sequence is given in the polymer of the present sequence is given in the polymer of the present sequence is given in the polymer of the present sequence is given in the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the polymer of the po
                                                                                                           enteropathogenic

It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
            The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described a sequence which encodes a foreign epitope or antigen. Also described (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinate companies.
                                                                                                                                                                          Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                           Disclosure; Page 136; 139pp; English.

(1) is CC cuseful for the expression of recombinant AgfA protein which is useful for CC eliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to SO, 000 copies/cell), the hybrid fimbrin protein possesses both the CC immunogenicity and adhesion properties relevant for an efficient live cardine, the carrier fimbrial subunit proteins are usually strong CC immunogens, which may be important for directing an immune response and hybrid fimbrian are nearly and content one and hybrid fimbrian are nearly and content one and hybrid a fambrian are nearly and content one and hybrid a fambrian are nearly and content one and hybrid a fambrian are nearly and content one and hybrid a fambrian are nearly and content one and hybrid a fambrian are nearly and content one content of the content and hybrid fambrian are nearly and content one content of the content of the content and hybrid fambrian are nearly and content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the

                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC segmence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CegA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species; (3) directing recombination of a recombinant AgfA comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the cCC polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for CC system the heterologous antigens are presented in high numbers (up to S00,000 copies/cell), the hybrid fimbrin protein see usually strong the immunogens, which may be importent for directing an immune response in an animal. The present seems both the immunogens, which may be importent for a resually strong against the inserted epitope, and hybrid fimbriae are easy and inserted epitope, and hybrid fimbriae are easy and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     श
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC directing recombination of a recombinant gene into the chromosome of the back into the chromosome of the homologous species; (3) directing recombination of a replacing the native back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA comprising a replacement segment or segments of foreign amino acid golymer comprising a recombinant AgfA content acid sequence or sequences grown on a Salmonella, E. coli or conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation conjunction, the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit proteins are usually strong communogenicity and adhesion properties relevant for an efficient live cagainst the inserted epitope, and hybrid fimbriae are usually strong construction which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and conversed to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 122;
